Asit Minz

Cloud Engineer | Linux ▪ Azure ▪ Bash ▪ PowerShell ▪ Terraform ▪ Docker

Bangalore, India ▪ +91-79780-04721 ▪ asitminz007@gmail.com ▪ asitminz.com ▪ linkedin.com/in/asitminz ▪ github.com/Asit0007

Professional Summary

Infrastructure engineer with approximately four years of enterprise experience across hybrid on-premises and Azure environments: Linux and Windows Server administration, L2/L3 on-call incident response, and patch governance across 2000+ servers monthly. Manages Azure VMs with Contributor access hosting IBM Cognos, IBM Maximo and SQL Server, patching through Azure Update Manager and remediating Microsoft Defender for Endpoint findings; manages users and GPOs in on-premises Active Directory synced to Entra ID. Builds cloud platforms with AWS, Terraform, Docker and GitHub Actions, and AI pipelines that run unattended at zero cost. AZ-104 certified.

Technical Skills

Security: HashiCorp Vault KV v2 with policy-scoped tokens; elimination of long-lived cloud access keys via EC2 instance profiles and the SDK credential chain; IAM roles, policies and instance profiles provisioned as code; OS patch governance and vulnerability remediation across 2000+ servers monthly; Microsoft Defender for Endpoint vulnerability remediation on Azure VMs; network isolation and exact-pinned dependencies

Operating Systems: RHEL and CentOS, production administration at enterprise scale; Ubuntu and Debian; Windows Server 2016 through 2022, provisioning, hardening and performance tuning

Cloud Platforms: Microsoft Azure, AZ-104 certified, production VM operations with Contributor access, Azure Update Manager patching, networking support; Amazon Web Services, EC2, VPC, S3, IAM, CloudWatch, instance profiles; Oracle Cloud Infrastructure, VCN, subnets, route tables, security lists, ARM compute; DigitalOcean

Directory Services: On-premises Active Directory synced to Entra ID; accounts, GPOs

CI/CD and Version Control: GitHub Actions, full pipeline ownership including lint gates, change detection, safety gates, selective per-service rebuilds, artifact transfer and post-deploy health checks; Git and GitHub, branching strategies, PR-based workflows, environment promotion

Scripting and Programming: Bash and PowerShell, daily production automation for health checks, patch validation, log remediation and configuration auditing; Python, automation tooling, REST integration, multi-service application logic; Go, REST API development with AWS SDK v2

Production Support and Incident Management: L2/L3 on-call ownership under contractual SLA; complex incident triage, log correlation, memory-dump analysis, root-cause analysis, postmortem documentation, preventive-fix implementation, vendor escalation with full diagnostic packages

Infrastructure as Code: Terraform, end-to-end provisioning and lifecycle management across four cloud providers including networking, compute, IAM and security groups; cloud-init bootstrap; YAML, JSON

Containers: Docker, multi-stage builds, image size optimisation, registry management, container lifecycle and log rotation; Docker Compose, decoupled multi-service architecture with shared volumes and inter-service networking; Kubernetes, working knowledge of core kubectl operations, building depth toward CKA

Professional Experience

System Administrator — Wintel & Virtualization, Technology Operations |
Microland Limited, Bangalore, India **Sep 2022 – Present**

- Progressed from Graduate Engineering Trainee to Administrator (promoted 2025).
- Manages Azure virtual machines with Contributor access that host IBM Cognos, IBM Maximo and Microsoft SQL Server
- Remediates vulnerabilities on Azure virtual machines reported by Microsoft Defender for Endpoint
- Patches Azure virtual machines through Azure Update Manager
- Creates user accounts and manages GPOs in on-premises AD, synced to Entra ID
- Builds new Azure virtual machines in the annual provisioning cycle
- Runs monthly patch cycles across 2000+ Windows and Linux servers with pre-deployment and post-deployment validation reporting
- Develops PowerShell and Bash automation for server health checks, patch validation and log remediation, reducing manual operational effort by approximately 20 percent
- Owns L2/L3 on-call rotations for a global enterprise client estate, triaging and resolving production incidents within contractual SLA windows, with RCA documentation
- Administers a RHEL and CentOS server fleet across enterprise client infrastructure
- Administers Windows Server 2016 through 2022 including provisioning, hardening and performance tuning
- Coordinates OS-level vulnerability assessments and patch governance with application and security teams
- Conducts monthly disaster recovery drills using Commvault, validating RPO and RTO targets
- Received the Super Squad and Key Contributor Recognition (2026) from the Chief Human Resource Officer, Microland
- Received the Super Squad Certificate of Recognition (Jan 2025) from the VP of

Client Delivery Americas for delivery on the NTTA IT programme

Graduate Engineering Trainee | Microland Limited, Bangalore, India **Mar 2022 – Aug 2022**

- Scored 80 percent or higher across Computer Networks, Operating Systems and Virtualization training, reaching full production responsibilities within 3 months

Projects

CloudPulse **2025**

Terraform ▪ Docker ▪ GitHub Actions ▪ HashiCorp Vault ▪ Go 1.25 ▪ AWS EC2

- Provisioned the AWS environment with Terraform including the EC2 instance, security group, IAM role, policy and instance profile, with user_data bootstrap and default VPC lookup via data sources
- Eliminated long-lived AWS access keys from the host by resolving credentials through the SDK default credential chain, backed by the EC2 instance profile in production and local profiles in development

ContentPipe **2026**

Node.js ▪ Express ▪ TypeScript ▪ React ▪ Vite ▪ Gemini API

- Built a Node.js and TypeScript service that turns a news story and its source links into a researched, cited, scene-by-scene video brief, with text generation walking a multi-provider LLM chain ranked by model intelligence so no single free-tier quota stops the pipeline
- Designed a strict mode for automated callers in which quota and overload return HTTP 429 or 503 with Retry-After instead of fallback content, and an interrupted request resumes from an on-disk checkpoint on an identical retry

Education

B.Tech in Computer Science | IIIT Bhubaneshwar **Graduated 2020**

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, OOP, Distributed Systems

Certifications

- Microsoft Certified: Azure Administrator Associate (AZ-104)
- HashiCorp Terraform Associate, in progress
- Certified Kubernetes Administrator (CKA), planned
